

# Go with the Flow

In typesetting, a “river” is a string of spaces formed by gaps between words that extends down several lines of text. For instance, Figure 1 shows several examples of rivers highlighted in red (text is intentionally blurred to make the rivers more visible).

**Figure 1:** Examples of rivers in typeset text.

Celebrated river authority Flo Ng wants her new book on rivers of the world to include the longest typographic rivers possible. She plans to set the text in a mono-spaced font (all letters and spaces have equal width) in a left-aligned column of some fixed width, with exactly one space separating words on each line (the text is not aligned on the right). For Flo, a “river” is defined as a sequence of spaces lying in consecutive lines in which the position of each space in the sequence (except the first) differs by at most 1 from the position of the space in the line above it. Trailing white space cannot appear in a river. Words must be packed as tightly as possible on lines; no words may be split across lines. The line width used must be at least as long as the longest word in the text. For instance, Figure 2 shows the same text set with two different line widths.

Line width 14: River of length 4	Line width 15: River of length 5
The Yangtze is	The Yangtze is
the third	the third

longest river	longest*river
in*Asia and	in Asia*and the
the*longest in	longest*in the
the*world to	world to*flow
flow*entirely	entirely*in one
in one country	country

**Figure 2:** Longest rivers (\*) for two different line widths.

Given a text, you have been tasked with determining the line width that produces the longest river of spaces for that text.

## Input

The first line of input contains an integer  $n$  ( $2 \leq n \leq 2500$ ) specifying the number of words in the text. The following lines of input contain the words of text. Each word consists only of lowercase and uppercase letters, and words on the same line are separated by a single space. No word exceeds 80 characters.

## Output

Display the line width for which the input text contains the longest possible river, followed by the length of the longest river. If more than one line width yields this maximum, display the shortest such line width.

Sample Input 1	Sample Output 1
21 The Yangtze is the third longest river in Asia and the longest in the world to flow entirely in one country	15 5

Sample Input 2	Sample Output 2
25 When two or more rivers meet at a confluence other than the sea the resulting merged river takes the name of one of those rivers	21 6
